

ANTBAC

WATER PRESERVATIVE CONCENTRATE

ANTBAC – Water Preservative Concentrate

One 250ml bottle of ANTBAC Water Preservative Concentrate is designed to maintain from 30-100 litres of potable water for up to three months. Cartons of four bottles provide a 1-year supply and offer a 36-month shelf life when stored below 30°C.

The ANTBAC is specifically designed to be used with Spill Station’s range of Self-Contained Eyewash Stations or products with a capacity of 30-100 litres of water. The water used to fill the self-contained products must be potable before adding the solution.

If you require a larger amount of water to be preserved, please do contact us with your requirements.
